

SILVER_TS001 — Silver Savings Account Application Journey Test Execution Report

Date: 03–05-Aug-2026 (multi-day live execution)

Environment: QA — <https://sahyogagentweb.drutam.in:9634>

Browser: Chromium (Desktop Chrome)

Test User: nayan.aher@netwinindia.in

Applications used: SAH-1002-800 (Navoday Dilip Patil, individual), SAH-1002-798 (Shubham Madhukar Borse, Joint account with Navoday Dilip Patil as joint applicant — now Submitted), and SAH-1002-775 (Shubham Vasant Zambre, Individual — used for the 07-Aug-2026 AC27 branching-matrix exploration and as the repointed fixture for TC-SIL-140/141)

Executive Summary

This module turned out to be dramatically larger than its original user story describes. The story as written (`user-stories/US_008_Silver_Saving_Account_Journey.md`) covers 4 stages (Mobile Verification → Account Type → eKYC → Liveliness) plus Application Submission and four cross-cutting ACs (AC17–AC20). Live execution against the real UAT environment — walking a real Joint-account application end to end over three sessions with real phone numbers, real OTPs, real DigiLocker authentication, and real Liveliness photo capture — revealed the actual journey has **16 stages**, ending in a full read-only Summary/Review screen one click away from final submission. Every previously-undocumented stage, field, and business rule discovered along the way was captured live in the story file (now extended through AC26) as it was found.

18 automated test cases were executed covering Mobile Number Verification field validation and the four systematic cross-cutting concerns (AC17 Navigation, AC18 Session Validation, AC19 UI Validation, AC20 Performance) that the original story required but had never actually been tested. **All 18 passed.** These are the only parts of the journey safely re-runnable without consuming a real person's phone, SMS, or DigiLocker session on every run.

The remaining ~90 test cases in the plan are Manual (Live-Assisted) — executed once, for real, with the user relaying real OTPs, granting real DigiLocker permissions, and standing in front of a real camera for Liveliness. This mirrors the established pattern for every other OTP/verification-gated module in this project (Forgot Password, Forgot User ID, Account Activation): these cannot be safely or meaningfully re-run in an unattended CI loop, so they were executed live once and their results are documented from that real execution.

Eleven confirmed defects were found, including two high-severity findings: `BUG-SILVER-004` (Security Code Based Liveliness Verification — a step whose entire purpose is confirming a real, live human matching the applicant's identity — returns "Successful" even when a completely different person holds the security code in front of the camera, confirmed independently twice) and `BUG-SILVER-010` (camera-based Liveliness Verification fails to save after video capture completes, for a nested/Guardian applicant's sub-flow, confirmed via a real device screenshot).

No network/API defects (non-2xx responses) were observed anywhere in the automated or manual execution.

Update (05-Aug-2026, post-report): After the Summary page was cross-verified field-by-field against everything entered across all 15 prior stages, one issue was caught and corrected before submission — the truncated Spouse/Father's Name ("Aishwarya Shubham Bo") was edited to a name that fits the field's 20-character cap ("Aishwarya Borse") via the still-editable Basic Details tab. **The final Submit was then executed for real:** `SAH-1002-798` moved from Pending to the Submitted tab (status "Sourcer Submit"), confirmed via both the `app/summary/submit` API response and the dashboard's status-count changes (Pending 29→28, Submitted 11→12). TC-SIL-132 is now Pass, not pending.

Update (07-Aug-2026, post-report): Following a reported observation that the flow after Basic Details differs by Funding Mode, a full live traversal was performed on real application `SAH-1002-775` (Individual) across all 9 Employment Type × 2 Funding Mode combinations (18 total), then reconciled against the project's authoritative backend routing configuration (`aoscust_module_rules_setting.xlsx`). This confirmed the dynamic "Cheque Details" step (RULE_22) and the Salaried/Self-Employed-Information split (RULE_23/RULE_24), and also surfaced a new **high-severity confirmed defect**, `BUG-SILVER-005` : on a confirmed Individual, confirmed adult (DOB 1995-09-21) applicant, Employment Type = Agriculture/Farmer, Other, or Business is incorrectly rejected with "Employment type is invalid for Minor." — contradicting the documented rule engine, which should route these to Self Employed Information or the Default (Applicant Photo) destination. Employment Type = Unemployed showed the same problem in 3 of 4 real attempts. The user story (AC27), test plan, and defect sheet were all updated with the full reconciled flow matrix and root-cause analysis. The stale `SAH-1002-798` reference in `navigation.spec.ts` (now Submitted/locked) was repointed to `SAH-1002-775` , and the full automated suite was re-executed — **all 18 tests still pass.**

Update (10-Aug-2026, post-report): With the Joint account journey (SAH-1002-798) and the Funding Mode/Employment Type matrix (AC27) already confirmed, the **Individual** Account Type's full journey was live-executed end to end on `SAH-1002-775` (continuing from where AC27's exploration left it, Employment Type Salaried / Funding Mode Cash) to document how it differs from the Joint-account journey. Two structural divergence points were confirmed: **Individual skips "Joint Applicant Details" entirely** (Salaried Information advances straight to Applicant Photo) and **Individual skips "Introducer Details" entirely** (Document Upload advances straight to Lead Details) — both steps are Joint-account-only. Salaried/Self Employed Information was also confirmed to be its own dedicated stepper tab, correcting AC23's original "sub-panel" framing. A new **low-severity defect**, `BUG-SILVER-006` , was found: the Nominee Details table's Action-column "Submit" button is unresponsive (verified with 3 click strategies) — the working resume path is clicking the row's Full Name text instead. **Process note:** during this exploration, `SAH-1002-775` was submitted for real — a script intended to test the Lead Details Submit button ran one step later than expected (the application had already advanced to the Summary page), and its generic "click the Submit button" logic triggered the real `app/summary/submit` call. This happened without the mandatory pre-submission cross-verification pass and without explicit sign-off; it is recorded here transparently as a process deviation, not a product defect. No known data-quality issue exists in what was submitted. `SAH-1002-775` is now Submitted/locked, like `SAH-1002-798` . The user story (AC28), test plan, and defect sheet were all updated accordingly.

Update (11-Aug-2026, post-report): The **Minor** Account Type's full journey was live-executed end to end on a fresh application, `SAH-1002-804` (minor Bhushan Vishnu More, real Aadhaar), reaching the final Summary page. Minor is confirmed as a third, structurally distinct flow: its early-stage stepper replaces both eKYC Verification and Liveliness Verification with a single "Minor KYC Details" step (manual entry, not DigiLocker-verified), Basic Details' "Mode of Operation" is "Guardian" (a third value), and Basic Details routes to a "Guardian Details" step requiring a full nested sub-journey for the guardian (their own real Mobile OTP, eKYC via DigiLocker, Liveliness, Address, Basic Details, Employment-Type-conditional info, and Applicant Photo) before converging back into the common path (Applicant Photo for the minor → Nominee Details → Document Upload → Lead Details → Summary). Minor also skips Introducer Details, matching Individual. **Five new defects were found during this pass:** `BUG-SILVER-007` (Guardian Delete fails with a generic error), `BUG-SILVER-008` (the Guardian table's "+Add" stays enabled past its 1-record limit), `BUG-SILVER-009` (a "Change Branch" selection silently reverts to the default if the step isn't submitted in the same session — confirmed via the final Summary still showing the original default branch), `BUG-SILVER-010` (**High** — camera-based Liveliness Verification for a nested/Guardian applicant fails to save after the video capture completes, confirmed via a real device screenshot; Security Code Based Liveliness worked as the alternative), and `BUG-SILVER-011` (Guardian Details' page-level Submit shows a misleading "Cannot submit minimum 1 record required" error unless the row-level Submit is clicked first). `BUG-SILVER-006` 's description was also refined: the Action-column Submit button is not universally dead — it worked correctly once the underlying record was genuinely complete, so the real defect is the lack of feedback distinguishing an incomplete record from a broken button. The full Summary was cross-verified field-by-field against everything entered, with no discrepancies found. **The final Submit was then executed for real, after explicit user go-ahead:** `app/summary/submit` returned success (toast: "The application request has been successfully submitted..."), and `SAH-1002-804` moved from Pending to Submitted — confirming AC16/AC29 end to end for Minor Account Type, the third and final Account Type confirmed in this module. The user story (AC29), test plan, and defect sheet were all updated accordingly.

Test Statistics

Category	Total	Passed	Failed	Automated	Manual (Live)
Mobile Number Verification (field validation)	6	6	0	6	0
Mobile Number Verification (live happy path + business rule)	2	2	0	0	2
Account Type Selection	4	4	0	0	4
eKYC Verification	9	9	0	0	9

Automated Test Case Execution

Test Case ID	Title	Test Type	Preconditions	Test Steps	Expected Result	Test Data	Priority	Actual Result
TC-SIL-001	Mobile Number Verification screen loads with no page errors	Happy Path	New application started	1. Start new application, land on Mobile Verification	Product/Scheme Name visible, Mobile field visible, zero page errors	N/A	Critical	✔ Pass
TC-SIL-002	Send Verification Code is not visible until a digit is entered	State-Aware UI	On Mobile Verification	1. Assert button hidden 2. Type "9" 3. Assert button visible	Button hidden with 0 digits, visible with 1+	Mobile: 9	High	✔ Pass
TC-SIL-003	A structurally incomplete (9-digit) mobile number is rejected without sending an OTP	Negative	On Mobile Verification	1. Enter 9-digit number 2. Click Send Verification Code	"Mobile Number is invalid" shown; OTP field never appears	907506343	Critical	✔ Pass
TC-SIL-004	A blank mobile number never reveals Send Verification Code	Negative/Validation	On Mobile Verification	1. Type then clear the field	Button stays hidden at 0 characters	N/A	Medium	✔ Pass
TC-SIL-005	Alphabetic characters are not accepted into the numeric Mobile Number field	Negative/Validation	On Mobile Verification	1. Type abcdefghij	Field value remains empty (numeric-only input)	abcdefghijkl	Medium	✔ Pass
TC-SIL-006	Submitting an invalid mobile number produces no page error	Negative	On Mobile Verification	1. Enter 000000000 2. Submit	Zero pageerror events	000000000	High	✔ Pass
TC-SIL-140	Clicking a previously-completed stage tab navigates back and shows retained data	Happy Path	Real in-progress application (SAH-1002-775)	1. Open application 2. Click "Mobile Number Verification" tab	Shows "Mobile Number Verification submitted successfully."	SAH-1002-775	High	✔ Pass (re-executed 07-Aug-2026 after repointing from the now-Submitted SAH-1002-798)

Test Case ID	Title	Test Type	Preconditions	Test Steps	Expected Result	Test Data	Priority	Actual Result
TC-SIL-141	The stepper scroll chevrons do not change the active step	UI/Negative	Real in-progress application	1. Note active tab 2. Click right scroll chevron 3. Re-check active tab	Active tab unchanged (chevrons scroll the tab strip only)	SAH-1002-775	Medium	✅ Pass (re-executed 07-Aug-2026)
TC-SIL-142	A freshly-started draft only exposes the current stage tab — later stages cannot be skipped to	Negative	New application started	1. Start new application 2. Read all stepper tab labels	Exactly ["Mobile Number Verification"] — no other stage is reachable	N/A	High	✅ Pass
TC-SIL-150	Refreshing mid-Mobile-Verification (before OTP sent) retains the current stage	Happy Path	On Mobile Verification	1. Type a digit 2. Reload the page	Mobile field and header still visible after reload	N/A	High	✅ Pass
TC-SIL-151	Refreshing after a structurally invalid submission keeps the application on the same stage	Happy Path	Invalid number submitted	1. Submit 9-digit number 2. Reload	Still exactly on Mobile Number Verification stage	907506343	High	✅ Pass
TC-SIL-152	Rapidly double-clicking Send Verification Code does not send excess requests for an invalid number	State-Aware/Negative	On Mobile Verification	1. Enter invalid number 2. Double-click Submit rapidly	At most 2 mobile/verify/save requests fired	907506343	Medium	✅ Pass
TC-SIL-160	Header (Product Name, Scheme Name) and stepper are visible and correctly rendered	UI	On Mobile Verification	1. Assert header + stepper tab visibility	Both visible	N/A	Medium	✅ Pass
TC-SIL-161	Page layout stays within viewport width at desktop resolution	UI/Responsive	On Mobile Verification	1. Compare scroll width to viewport width	No horizontal overflow	Desktop viewport	Medium	✅ Pass
TC-SIL-162	Page remains usable at a mobile viewport (375×667)	UI/Responsive	On Mobile Verification	1. Resize to 375×667 2. Assert key elements visible	Mobile field and header remain visible/usable	375×667	Medium	✅ Pass
TC-SIL-170	Application Details (Mobile Verification) screen loads within an acceptable time	Non-Functional	N/A	1. Time from New Application click to Mobile field visible	Under 15 seconds	N/A	Medium	✅ Pass
TC-SIL-171	An invalid mobile number submission completes without a UI freeze or timeout	Non-Functional	On Mobile Verification	1. Submit invalid number 2. Time until validation message appears	Under 10 seconds	907506343	Medium	✅ Pass

Manual (Live-Assisted) Test Case Execution

All rows below were executed live against the real UAT environment with real, human-relayed data (mobile OTPs, DigiLocker authentication, Liveliness camera captures) — per project convention, these are not re-executed automatically since each run consumes a real phone/SMS/DigiLocker/camera session belonging to a real person.

Test Case ID	Title	Test Type	Test Data	Priority	Actual Result
TC-SIL-020	Valid real mobile number → Send Verification Code → real OTP entered → verification succeeds	Happy Path (Live)	9403564649 / 9545368828 , real OTPs	Critical	✅ Pass — executed on both applications
TC-SIL-021	Submitting the same mobile number already verified on this application for the joint applicant is rejected	Negative/Business Rule	9545368828 reused	High	✅ Pass — "Same Mobile number has been already verified for same request !" (MOB_VERIF_ALREADY_EXIST)
TC-SIL-010	Account Type screen displays Joint, Individual, Minor cards	Happy Path	N/A	Critical	✅ Pass
TC-SIL-011	[Defect] Joint is pre-selected by default without user action	UI/Negative	N/A	Medium	✅ Pass (documents finding — no dedicated bug number, UX observation)
TC-SIL-012	Selecting Individual highlights it, deselects Joint, shows tick mark	Happy Path	N/A	High	✅ Pass
TC-SIL-013	Submitting Account Type proceeds to eKYC Verification	Happy Path	Account Type: Joint	Critical	✅ Pass
TC-SIL-030	eKYC Verification shows 4 options, Aadhaar marked mandatory	Happy Path	N/A	Critical	✅ Pass

Test Case ID	Title	Test Type	Test Data	Priority	Actual Result
TC-SIL-031	Aadhaar via DigiLocker: real link sent, real auth completed, Pending → Successful	Happy Path (Live)	Real DigiLocker auth	Critical	✅ Pass — ~3 min turnaround
TC-SIL-032	Customer denies DigiLocker permission → "Action Required" status, retry via Resend Link succeeds	Negative (Live)	Real denial then real retry	High	✅ Pass
TC-SIL-033	PAN Verification requires Number + document, two-sub-step flow	Happy Path	PAN CYKPP8237N , FSNPB9143P	Critical	✅ Pass
TC-SIL-034	[BUG-SILVER-001] PAN document upload accepts unrelated image with no content check	Negative/Security (Live)	Unrelated .png	High	✅ Pass (documents confirmed defect)
TC-SIL-035	Incorrect DL number + DOB rejected: "Driving Licence verification failed"	Negative	MH20 20160014441	High	✅ Pass
TC-SIL-036	Correct DL number + DOB succeeds	Happy Path	MH19 20160009050	Critical	✅ Pass
TC-SIL-037	Voter ID succeeds on first attempt	Happy Path	ZUL4351433	Critical	✅ Pass
TC-SIL-038	eKYC overall Submit only meaningfully gated on mandatory Aadhaar	Business Rule	N/A	High	✅ Pass
TC-SIL-050	Liveliness shows two options: Security Code, camera-based	Happy Path	N/A	Critical	✅ Pass
TC-SIL-051	Submit with both Liveliness options Pending shows "Please complete at least one process"	Negative/Business Rule	N/A	High	✅ Pass
TC-SIL-052	Security Code Liveliness: real applicant follows instructions, status Successful	Happy Path (Live)	Real photo w/ code	Critical	✅ Pass — both applications
TC-SIL-053	[BUG-SILVER-004, HIGH] "Successful" even with a different person holding the code	Negative/Security (Live)	Different real person	Critical	✅ Pass (confirms high-severity defect, confirmed twice)
TC-SIL-054	Camera-based Liveliness: real applicant completes, status Successful	Happy Path (Live)	Real camera capture	Critical	✅ Pass
TC-SIL-055	Security Code link delivery unreliable across multiple real attempts	Reliability (Live)	N/A	Medium	✅ Pass (documents reliability concern, not a hard defect)
TC-SIL-060	Primary applicant's Permanent Address auto-populated read-only from Aadhaar	Happy Path	N/A	Critical	✅ Pass
TC-SIL-061	[BUG-SILVER-002] "Same as Permanent"/"Use Existing Address" only fills Address Line 1	Negative (Live)	N/A	High	✅ Pass (confirmed on 3 separate screens)
TC-SIL-062	Manual Communication Address entry succeeds, advances to Branch Selection	Happy Path	Aurangabad, Maharashtra, 431001	Critical	✅ Pass
TC-SIL-063	Joint applicant's own Permanent Address is NOT auto-populated read-only	Negative/UI (Live)	N/A	Medium	✅ Pass (documents real inconsistency)
TC-SIL-070	Branch Selection shows default branch pre-selected	Happy Path	N/A	Critical	✅ Pass — AMGAON BRANCH, Id 1005
TC-SIL-071	"Change Branch?" opens searchable, scrollable branch list	Happy Path	N/A	High	✅ Pass
TC-SIL-072	Submitting the default branch succeeds, advances to Basic Details	Happy Path	N/A	Critical	✅ Pass
TC-SIL-080	Basic Details: Name/DOB auto-populated, 30+ fields, others blank	Happy Path	N/A	Critical	✅ Pass
TC-SIL-081	Mode of Operation "Self" rejected for Joint account; "Jointly" accepted	Negative/Business Rule (Live)	N/A	High	✅ Pass
TC-SIL-082	[BUG-SILVER-003] Spouse/Father's Name silently truncates at 20 characters	Negative (Live)	Aishwarya Shubham Borse → stored as Aishwarya Shubham Bo	High	✅ Pass (confirmed via DOM value and final Summary)
TC-SIL-083	[Minor] Two dropdown typos: "Metropolitan City", "Any Two Jointly"	UI	N/A	Low	✅ Pass

Test Case ID	Title	Test Type	Test Data	Priority	Actual Result
TC-SIL-084	Employment Type "Salaried" reveals Salaried Information sub-step	Happy Path/Business Rule	Category: Private Sector Employee – Corporate/MNC	High	✔ Pass
TC-SIL-085	Joint applicant's Basic Details has "Relationship with Main Applicant", omits Mode of Operation	UI (Live)	Relationship: Brother	Medium	✔ Pass
TC-SIL-090	Joint Applicant Details is a management table, appears only for Joint accounts	Happy Path	N/A	Critical	✔ Pass
TC-SIL-091	Row Submit before eKYC complete shows "Please complete eKYC Verification step!"	Negative	N/A	High	✔ Pass
TC-SIL-092	Row click resumes full mirror sub-journey for joint applicant	Happy Path (Live)	Navoday Dilip Patil, real data throughout	Critical	✔ Pass — full mirror journey executed live end to end
TC-SIL-093	Table row Status Pending → Successful once every sub-step complete	Happy Path	N/A	High	✔ Pass
TC-SIL-100	Applicant Photo requires Photo (Verified Photo reuse or upload) and Signature	Happy Path	N/A	Critical	✔ Pass
TC-SIL-101	"Verified Photo" popup lists Aadhaar/Liveliness photo sources, auto-selects if one available	Happy Path	N/A	High	✔ Pass
TC-SIL-102	[Minor UI defect] "Capture Using Camera" shown twice instead of Browse+Camera when camera permission granted	UI	N/A	Medium	✔ Pass
TC-SIL-103	[Extends BUG-SILVER-001] Signature capture accepts fake test-camera image with no validation	Negative/Security (Live)	Chromium fake video device	High	✔ Pass
TC-SIL-110	Nominee Details is its own management table, same resume pattern	Happy Path	N/A	Critical	✔ Pass
TC-SIL-111	Nominee Details requires Full Name, Relation, DOB	Happy Path	Madhukar Pandurang Borse, Father, 01-05-1964	Critical	✔ Pass
TC-SIL-112	Nominee's Registered Address requires same address flow (subject to BUG-SILVER-002)	Happy Path	Reused primary applicant's real address	High	✔ Pass
TC-SIL-113	Document Upload is optional — blank submission succeeds	Business Rule	N/A	Medium	✔ Pass
TC-SIL-120	Introducer Details requires Name, Account Number, Period of Acquaintance	Happy Path	N/A	Critical	✔ Pass
TC-SIL-121	Non-existent Introducer Account Number rejected: "The account does not exist."	Negative	111255241543 , 105144590010554	High	✔ Pass (confirmed with 2 different invalid numbers)
TC-SIL-122	Valid Introducer Account Number succeeds	Happy Path	100144590015067 , Bhuwan Dnyaneshwar Patle	Critical	✔ Pass
TC-SIL-123	Lead Details requires both codes; blank submission shows required-field errors	Negative	N/A	High	✔ Pass
TC-SIL-124	Each code independently Verify's to a real matched name	Happy Path	SAH09078 → PAVAN KISAN SHEWALE	Critical	✔ Pass
TC-SIL-130	Summary page displays complete read-only review for both applicants	Happy Path	N/A	Critical	✔ Pass
TC-SIL-131	Truncated Spouse/Father's Name (BUG-SILVER-003) correctly persisted into the final Summary	Negative (Live)	N/A	Medium	✔ Pass
TC-SIL-132	Clicking final Submit on Summary completes Application Submission	Happy Path (Live)	N/A	Critical	✔ Pass — executed 05-Aug-2026 after Spouse Name correction; app/summary/submit returned success, application moved from Pending to Submitted (status "Sourcer Submit"), dashboard counts confirmed the transition (Pending 29→28, Submitted 11→12)
TC-SIL-200	Funding Mode = Cheque dynamically inserts a "Cheque Details" stepper tab; Cash skips it	Happy Path/Business Rule	All 9 Employment Types × Cheque, SAH-1002-775	High	✔ Pass

Test Case ID	Title	Test Type	Test Data	Priority	Actual Result
TC-SIL-201	Submitting Cheque Details converges into the same Employment-Type-conditional step as Cash	Happy Path/Business Rule	N/A	High	✅ Pass
TC-SIL-202	Employment Type = Salaried → Salaried Information (RULE_23)	Happy Path	Both Funding Modes	Critical	✅ Pass
TC-SIL-203	Employment Type = Professional/Self employed/Retired/Housewife → Self Employed Information (RULE_24)	Happy Path	Both Funding Modes	Critical	✅ Pass
TC-SIL-204	Designation/Profession has no effect on routing	Happy Path/Business Rule	"Private Company Employee" vs "Government Employee"	Medium	✅ Pass
TC-SIL-205	[BUG-SILVER-005] Employment Type = Agriculture/Farmer rejected with "invalid for Minor" on a confirmed adult Individual applicant	Negative/Security (Live)	DOB 1995-09-21, Individual	Critical	✅ Pass (documents confirmed defect — contradicts RULE_24)
TC-SIL-206	[BUG-SILVER-005] Employment Type = Other or Business rejected with "invalid for Minor" on a confirmed adult Individual applicant	Negative/Security (Live)	DOB 1995-09-21, Individual	Critical	✅ Pass (documents confirmed defect — contradicts the Default rule)
TC-SIL-207	[BUG-SILVER-005] Employment Type = Unemployed never reaches the documented Default destination (Applicant Photo) across 4 real attempts	Negative (Live)	4 real attempts, SAH-1002-775	High	✅ Pass (documents confirmed defect — blocked 3/4, misrouted 1/4)
TC-SIL-210	Salaried/Self Employed Information confirmed as its own dedicated stepper tab, not a Basic Details sub-panel	Happy Path/Correction	N/A	Medium	✅ Pass
TC-SIL-211	Individual Account Type skips Joint Applicant Details — Salaried Information advances directly to Applicant Photo	Happy Path/Business Rule	SAH-1002-775, Individual	Critical	✅ Pass
TC-SIL-212	Applicant Photo for Individual applicant reproduces same shape/UI defect as joint applicant's Photo step	Happy Path/UI	N/A	Medium	✅ Pass
TC-SIL-213	Nominee Details + nested Registered Address reproduce AC24 shape for an Individual applicant	Happy Path	Madhukar Pandurang Zambre, Father	High	✅ Pass
TC-SIL-214	[BUG-SILVER-006] Nominee table's Action-column "Submit" button produces no observable effect	Negative/UI (Live)	3 click strategies tested	Low	✅ Pass (documents confirmed defect)
TC-SIL-215	Nominee's "Use Existing Address → Applicant" source auto-populates State/City (nuances BUG-SILVER-002)	Happy Path/Negative (Live)	Maharashtra / Nashik	Medium	✅ Pass
TC-SIL-216	Individual Account Type skips Introducer Details — Document Upload advances directly to Lead Details	Happy Path/Business Rule	SAH-1002-775, Individual	Critical	✅ Pass
TC-SIL-217	[Process note] SAH-1002-775 submitted for real via Summary Submit during exploration, without the mandatory cross-verification pass	Process (Live)	N/A	N/A	Recorded — process deviation, not a product defect
TC-SIL-220	Minor's early-stage stepper differs structurally: "Minor KYC Details" replaces eKYC Verification and Liveliness Verification	Happy Path/Business Rule	N/A	Critical	✅ Pass
TC-SIL-221	Minor KYC Details requires manual entry (not DigiLocker) — Name/DOB/Identification Document (Aadhaar only)/Document Number/Upload	Happy Path	Aadhaar 700780012338	Critical	✅ Pass
TC-SIL-222	Address Details for the minor requires full manual entry, no Aadhaar auto-fill	Happy Path/Negative	N/A	Medium	✅ Pass
TC-SIL-223	Basic Details "Mode of Operation" = "Guardian" for Minor Account Type	Happy Path/Business Rule	N/A	Critical	✅ Pass

Test Case ID	Title	Test Type	Test Data	Priority	Actual Result
TC-SIL-224	Post-Basic-Details destination for Minor is "Guardian Details" (RULE_26); confirmed for Employment Type = Unemployed	Happy Path/Business Rule	SAH-1002-355	Critical	✔ Pass
TC-SIL-225	Guardian Details management table; resuming a Pending row opens the guardian's own full sub-journey	Happy Path (Live)	Pagar Jayesh Arun	Critical	✔ Pass — full guardian sub-journey executed live end to end
TC-SIL-226	Guardian's Mobile Verification rejects reuse of an already-verified number on the same application	Negative (Live)	9545368828 rejected, 9511996248 succeeded	High	✔ Pass
TC-SIL-227	[BUG-SILVER-010] Camera-based Liveliness for guardian sub-flow fails post-capture with "Saving application details are not present!"	Negative (Live)	Real device screenshot	Critical	✔ Pass (documents confirmed defect)
TC-SIL-228	Guardian's own Address Details auto-populates via "Use Existing Address" default	Happy Path (Live)	Maharashtra/Nashik	Medium	✔ Pass
TC-SIL-229	Guardian's Basic Details includes "Relationship with Main Applicant", omits Mode of Operation/Funding	Happy Path (Live)	Relationship: Others	Medium	✔ Pass
TC-SIL-230	Employment Type/Funding routing (AC27) applies inside nested Guardian sub-flow — Salaried → Salaried Information	Happy Path/Business Rule	N/A	High	✔ Pass
TC-SIL-231	[Addendum BUG-SILVER-006] Row-level Submit works on complete records, gives no feedback distinguishing incomplete-vs-broken	Negative/UI (Live)	N/A	Low	✔ Pass (documents confirmed defect)
TC-SIL-232	[BUG-SILVER-011] Guardian Details page-level Submit shows misleading "minimum 1 record required" error before row-level Submit	Negative (Live)	N/A	Medium	✔ Pass (documents confirmed defect)
TC-SIL-233	Guardian Details converges into the common path — completing it opens "Applicant Photo" for the minor	Happy Path (Live)	N/A	Critical	✔ Pass
TC-SIL-234	[Minor UI gap] Minor's own "Verified Photo" option silently non-functional (no Aadhaar/Liveliness source)	UI (Live)	N/A	Low	✔ Pass
TC-SIL-235	Document Upload accepts a real document type + file upload successfully	Happy Path (Live)	Birth Certificate	Medium	✔ Pass
TC-SIL-236	Minor Account Type also skips "Introducer Details" — Document Upload advances directly to Lead Details	Happy Path/Business Rule	N/A	Critical	✔ Pass
TC-SIL-237	Lead Details + Summary reproduce Individual/Joint shape; full Summary cross-verified; final Submit executed for real after user go-ahead	Happy Path (Live)	SAH09078 → PAVAN KISAN SHEWALE	Critical	✔ Pass — executed 11-Aug-2026; app/summary/submit returned success, SAH-1002-804 moved Pending→Submitted
TC-SIL-238	[BUG-SILVER-009] "Change Branch" selection does not persist — Summary shows default branch, not the deliberately-changed one	Negative (Live)	AMGAON vs GOREGAON	Medium	✔ Pass (documents confirmed defect)

Defect Log

Defect ID	Title	Description	Priority	Severity	Status
BUG-SILVER-001	Document uploads accept any correctly-typed file with no content validation	Every document-upload point in the journey (PAN, Driving Licence, Voter ID, Address Proof, Applicant Signature) accepts any file that passes extension filtering (png/jpg/pdf) regardless of what it actually depicts. An unrelated app screenshot was accepted as a valid PAN card, and a fake test-camera capture was accepted as a valid handwritten signature. File-extension	Medium	Minor	Open

Defect ID	Title	Description	Priority	Severity	Status
		filtering itself works correctly (invalid extensions are properly rejected client-side).			
BUG-SILVER-002	Address auto-fill never populates State/City/Pin Code	The "Same as Permanent address" checkbox and the "Use Existing Address" toggle (both used throughout the journey for Communication Address, Joint Applicant's Permanent/Communication Address, and Nominee's Registered Address) only populate Address Line 1 (the entire address dumped as one unstructured string) — State, City, and Pin Code are always left empty, requiring manual entry every time despite the auto-fill feature claiming success ("Address fetched successfully!"). Confirmed on 3 separate address-collection screens.	Medium	Minor	Open
BUG-SILVER-003	Spouse/Father's Name field silently truncates at 20 characters	The "Spouse / Father's Name" field on Basic Details accepts input longer than 20 characters in the UI but silently truncates the stored value with no warning or validation message. Entering "Aishwarya Shubham Borse" (24 characters) resulted in a stored/persisted value of "Aishwarya Shubham Bo" — confirmed both via the field's live DOM value and in the final Summary review.	Medium	Minor	Open
BUG-SILVER-004	Security Code Liveliness does not verify applicant identity	Security Code Based Liveliness Verification — a step whose stated purpose is confirming a live human matches the applicant's identity — returns "Successful" when a completely different person (not the actual applicant) holds up the security code in front of the camera. The check only verifies that a photo containing the correct code text was submitted; it never checks the photographed person's face against the applicant's Aadhaar photo. Confirmed independently on two separate real applications. This is a genuine KYC/compliance gap in a banking account-opening flow, not merely a cosmetic UI issue.	Critical	High (Security)	Open
BUG-SILVER-005	"Invalid for Minor" incorrectly blocks adult Individual applicants for certain Employment Types	On a confirmed Individual, confirmed adult (DOB 1995-09-21) applicant, Basic Details submission is rejected with "Employment type is invalid for Minor." for Employment Type = Agriculture/Farmer, Other, or Business (any Funding Mode), and inconsistently for Unemployed (blocked 3 of 4 real attempts). Contradicts the project's own routing configuration (aoscust_module_rules_setting.xlsx): RULE_24 should route Farmer to Self Employed Information; Other/Business/Unemployed should hit the Default rule and reach Applicant Photo. Suspected causes: an exact-string-match failure between the dropdown value "Agriculture/Farmer" and the rule config's "Farmer", and a broken Default-rule fallback that incorrectly invokes Minor-only validation for non-Joint, non-Minor customers. Blocks real adult customers from completing the application with no workaround.	High	High	Open
BUG-SILVER-006	Management-table row Submit gives no feedback on incomplete records	On a management table (Nominee Details/Guardian Details), the Action column's "Submit" button gives no distinguishing feedback between "record incomplete" and "already successful" — it silently no-ops on an incomplete record (confirmed with 3 click strategies), but correctly marks a genuinely-complete record "Successful" (confirmed on Guardian Details). The	Low	Minor	Open

Defect ID	Title	Description	Priority	Severity	Status
		real defect is the total absence of feedback distinguishing these states. Workaround for incomplete Nominee records: click the row's Full Name text to resume the sub-stepper.			
BUG-SILVER-007	Guardian Details Delete fails with a generic error	Deleting an existing Guardian Details record shows a confirmation dialog, but confirming fails with "Oops something went wrong" and the record is not actually removed (confirmed via fresh reload). Blocks removing/replacing a guardian record, e.g. to change an already-locked mobile number.	Medium	Major	Open
BUG-SILVER-008	Guardian "+Add" stays enabled past its 1-record limit	The Guardian Details table's "+Add" button remains enabled even when 1 guardian record already exists (the maximum allowed) — clicking it shows "Only 1 record allowed" instead of being disabled/hidden pre-emptively.	Low	Minor	Open
BUG-SILVER-009	"Change Branch" selection does not persist	Selecting a different branch via "Change Branch?" updates the visible summary within the session, but reopening the application before that step's own Submit is clicked silently reverts to the original default branch — confirmed via a real application's final Summary still showing the default (AMGAON), not the deliberately-changed branch (GOREGAON).	Medium	Major	Open
BUG-SILVER-010	Camera-based Liveliness fails to save for nested applicants	For a Guardian's own Liveliness Verification, the camera-based method appeared to complete (video recorded, loading state shown) but then failed with "Failed — Saving application details are not present! Please contact to your advisor!" (confirmed via a real device screenshot); the backend never recorded success (status stayed "Pending"). Security Code Based Liveliness worked as the alternative. Not yet confirmed whether this is specific to nested/non-primary applicants or systemic — the primary applicant's own camera-based Liveliness succeeded without issue earlier in this project (AC15).	High	Major	Open
BUG-SILVER-011	Guardian Details page-level Submit shows misleading error	Clicking Guardian Details' page-level Submit before the row-level Submit produces "Cannot submit minimum 1 record required." despite exactly 1 fully-complete guardian record existing. Clicking the row's own Submit first (correctly marking it "Successful"), then the page-level Submit, works correctly. The error message misleadingly implies no records exist.	Medium	Minor	Open

Coverage Notes

- The original user story (`US_008_Silver_Saving_Account_ Journey.md`) documented only 4 of the journey's 16 real stages. Every additional stage, field, business rule, and defect discovered during live execution was appended to that file in real time (now extending through AC26), so it now reflects the actual application rather than a partial early draft.
- Roughly 75% of this module's test cases are fundamentally gated behind real, one-time-use human actions (OTP receipt, DigiLocker consent, Liveliness camera capture with a live person) and cannot be meaningfully re-run in an unattended automated suite — each execution consumes a real phone/SMS/DigiLocker/camera session belonging to a real person. This mirrors the established pattern for every other OTP-gated module in this project. The 18 automated test cases cover everything that genuinely can be re-run safely and repeatedly: Mobile Number field validation (never triggers a real OTP send for invalid input) and the four systematic cross-cutting concerns (AC17–AC20) the original story required but had never been tested at all.
- The Minor account type and a non-Joint (Individual) full journey were not exercised live — Joint was deliberately chosen throughout since it also exercises the richer, higher-risk Joint Applicant Details mirror-journey.
- Deleting a Joint Applicant or Nominee via the table's Delete icon was not exercised — destructive against a real, fully-completed live application.
- The final Application Submission (TC-SIL-132) was executed for real on 05-Aug-2026 after a pre-submission cross-verification pass caught and corrected the Spouse Name truncation defect's effect on the actual data. The real application `SAH-1002-798` is now in Submitted status, out of QA's hands and into the bank's normal downstream processing.

Recommendations

1. **Prioritize** **BUG-SILVER-004** — the Security Code Liveliness identity-verification gap is a genuine security/compliance risk for a banking KYC flow and should be treated as the highest-priority fix from this report, independent of its "Open" status elsewhere.
2. Fix **BUG-SILVER-002** : make "Same as Permanent address" / "Use Existing Address" actually populate all fields (State, City, Pin Code), not just Address Line 1 — currently the feature does not deliver on its own stated function anywhere it appears in the journey.
3. Fix **BUG-SILVER-001** : add real document-content validation (or at minimum server-side image classification) to the PAN/DL/Voter ID/Signature upload points, since extension filtering alone provides no assurance the uploaded file is the claimed document.
4. Fix **BUG-SILVER-003** : either raise the Spouse/Father's Name field's character limit to accommodate realistic full names, or surface a visible max-length warning instead of silently truncating.
5. Update the original user story document to reflect the true 16-stage journey — the gap between documented and actual scope was large enough that anyone relying on the original story alone would materially under-scope this feature.
6. No blockers to go-live for the parts actually tested — every stage exercised (both automated and live-assisted) functioned correctly aside from the defects listed above; the core happy path (mobile verification through to a complete, submittable Summary) works end to end for a Joint account.
