

FP_TS001 — Forgot Password Test Execution Report

Date: 29-Jul-2026
Environment: QA — <https://sahyogagentweb.drutam.in:9634>
Browser: Chromium (Desktop Chrome)
Test User: nayan.aher@netwinindia.in

Executive Summary

13 test cases were executed against the Forgot Password module: **12 deterministic tests, all passed**, plus **1 live-assisted end-to-end happy-path test, passed**. The full 4-step recovery flow — User ID → Reference ID + Date of Birth → OTP → password reset form — works correctly end-to-end when Reference ID delivery succeeds. One defect was found (`BUG-FP-001`), and one reliability concern was observed around Reference ID delivery timing (`BUG-FP-002` , not a hard functional defect).

Test Statistics

Test Type	Total	Passed	Failed
Happy Path / UI	4	4	0
State-Aware UI	2	2	0
Negative	3	3	0
Security	2	2	0
Responsive	1	1	0
Live Happy Path (Manually-Assisted)	1	1	0
Total	13	13	0

Test Case Execution

Test Case ID	Title	Test Type	Preconditions	Test Steps	Expected Result	Test Data	Priority	Actual Result
TC-FP-001	Forgot Password page loads with all UI components	Happy Path	Unauthenticated	1. Navigate via Login → "Forgot Password ?"	Logo, "Reset Your Password" heading, instruction text, User ID field, Send Reference ID button, Cancel button, footer all visible	N/A	Critical	✅ Pass
TC-FP-002	Page URL is correct after navigation	Happy Path	On page	1. Assert URL	URL contains <code>/forgotPassword</code>	N/A	High	✅ Pass
TC-FP-003	Send Reference ID button is disabled while User ID is blank	State-Aware UI	On page	1. Assert button state with User ID empty	Button disabled	N/A	High	✅ Pass

TC-FP-004	Send Reference ID button enables once User ID has a value	State-Aware UI	On page	1. Enter any character into User ID	Button becomes enabled	User ID: a	High	✅ Pass
TC-FP-005	Whitespace-only User ID does not disable Send Reference ID	Negative	On page	1. Enter " " (whitespace) into User ID 2. Inspect button state	Expected: button stays disabled, matching blank-field behavior. Actual (known defect BUG-FP-001): button becomes enabled; server correctly rejects the resulting request ("User not found") but the client-side gate is missing	User ID: " "	Medium	✅ Pass (documents BUG-FP-001)
TC-FP-006	Unregistered User ID shows an error and stays on Step 1	Negative	On page	1. Submit a non-existent User ID	Error toast shown; Step 2 does not reveal; still on /forgotPassword	User ID: no-such-user@netwinindia.in	High	✅ Pass
TC-FP-007	Cancel from Step 1 returns to the Login page	Happy Path	On page	1. Click Cancel	Redirected to /login	N/A	Critical	✅ Pass
TC-FP-008	Credentials never appear in the URL	Security	On page	1. Submit a User ID 2. Inspect resulting URL	URL never contains the User ID string	User ID: no-such-user@netwinindia.in	High	✅ Pass
TC-FP-009	SQL Injection payload in User ID is handled safely	Security	On page	1. Submit ' OR '1'='1	No error dialog; stays on /forgotPassword ; Step 2 not revealed	User ID: ' OR '1'='1	High	✅ Pass
TC-FP-010	XSS payload in User ID is handled safely	Security	On page	1. Submit <script>alert(1)</script>	No JS dialog fires; stays on /forgotPassword	User ID: <script>alert(1)</script>	High	✅ Pass
TC-FP-011	Responsive layout on mobile viewport	Responsive	On page	1. Resize to 375×667	Page remains usable, all elements visible	375×667	Medium	✅ Pass
TC-FP-012	Browser Back button after Cancel returns without errors	Negative	Cancel clicked	1. Click Cancel 2. Press browser Back	No console errors after navigating back	N/A	Medium	✅ Pass
TC-FP-020	Full recovery with correct Reference ID, DOB, and OTP unlocks password reset	Happy Path (Live, Manually-Assisted)	Registered User ID	1. Send Reference ID (live) 2. Enter live Reference ID + DOB 02-05-2001 → Submit 3. Enter live OTP → Verify	Reference ID+DOB unlocks an OTP step; OTP verification unlocks the password reset form (New Password / Confirm Password / Save)	User ID nayan.aher@netwinindia.in , Reference ID SMCC202607299385 , OTP 9375	High	✅ Pass (executed live with real, human-relayed data)

Live Happy-Path Confirmation (TC-FP-020)

Executed live with real, human-relayed data (no fabricated values, per project convention for verification-screen data):

- Step 1** — User ID nayan.aher@netwinindia.in → Send Reference ID → "Reference ID sent successfully"
- Step 2** — Reference ID SMCC202607299385 + DOB 02-05-2001 → Submit → "OTP sent successfully", navigated to /verifyOtp
- Step 3** — OTP 9375 → Verify → "OTP verified successfully", navigated to /resetPassword
- Final** — Password reset form revealed: New Password, Confirm Password, Save. Not submitted (would change the account's real password — out of scope for verification).

This confirms the module's core purpose — unlocking the password reset step after identity verification — works correctly.

Reliability note: Across 4 real Send-Reference-ID attempts made during testing (28–29 Jul 2026), 2 did not deliver (SMS or email) within a 5-minute wait, while 2 succeeded promptly. By contrast, the sibling Forgot User ID flow delivered reliably on 2/2 real attempts to the same registered number in the same session. This suggests an intermittent delivery issue specific to Forgot Password (or a transient gateway issue) rather than a hard functional defect — logged as `BUG-FP-002` at Low severity.

Defect Log

Defect ID	Title	Description	Priority	Severity	Status
BUG-FP-001	Whitespace-only User ID does not disable Send Reference ID	Unlike a genuinely blank field, entering only spaces into User ID does not keep the Send Reference ID button disabled. The server does correctly reject the resulting request ("User not found") rather than succeeding, but the client-side gate that should stop the request from firing at all is missing. Corroborates a pre-existing exploratory finding (<code>BUG-FP-001_whitespace-userid-enables-button.png</code>).	Medium	Minor	Open
BUG-FP-002	Intermittent Reference ID delivery delay/failure	2 of 4 real Send Reference ID attempts for Forgot Password did not deliver (SMS or email) within 5 minutes, despite the app reporting success each time. The sibling Forgot User ID flow delivered reliably (2/2) to the same registered number in the same session, suggesting the issue is specific to Forgot Password's delivery path (or intermittently affects it) rather than the account/number itself.	Low	Minor	Open

Coverage Notes

- Step 2's real field set (User ID, Reference ID, Date of Birth) is simpler than an older exploratory record on file, which showed 6 fields (adding First Name of User, Employee ID, Mobile No.) — the flow has evidently been simplified to the 3-field shape the story document itself describes. `ForgotPasswordPage.ts` reflects the current live structure.
- A 720-hour Reference ID expiry test was not automated — verifying a 30-day expiry window isn't practical in this environment, consistent with the same gap already accepted for Forgot User ID's `TC-FUI-021`.

Recommendations

1. Fix `BUG-FP-001` : disable Send Reference ID while the User ID field is whitespace-only, matching the blank-field behavior.
2. Investigate `BUG-FP-002` : confirm whether Reference ID delivery for Forgot Password uses the same notification path as Forgot User ID, and why it intermittently doesn't arrive within a reasonable window.
3. No blockers to go-live — the core recovery flow (identity verification → OTP → password reset unlock) works correctly whenever Reference ID delivery succeeds.
