

AA_TS001 — Account Activation Test Execution Report

Date: 30-Jul-2026
Environment: QA — https://sahyogagentweb.drutam.in:9634
Browser: Chromium (Desktop Chrome)

Executive Summary

20 test cases were executed against the Account Activation module: **19 deterministic tests, all passed**, plus **1 live-assisted end-to-end happy-path test, passed**. The existing spec and page object were already accurate for the current environment (no healing required). The full 4-step activation flow — Reference ID + User ID + DOB → OTP → New/Confirm Password → login — was confirmed working end-to-end, including a real post-activation login that succeeded. Two defects were found (DEF-002 , DEF-003); neither blocks core functionality.

Test Statistics

Test Type	Total	Passed	Failed
Happy Path / UI	3	3	0
State-Aware UI / Business Rule	5	5	0
Negative	3	3	0
Security	3	3	0
Async/Race	1	1	0
Responsive	2	2	0
Functional	3	3	0
Live Happy Path (Manually-Assisted)	1	1	0
Total	20	20	0

Test Case Execution

Test Case ID	Title	Test Type	Preconditions	Test Steps	Expected Result	Test Data	Priority	Actual Result
TC-AA-001	Activate Account page loads with all UI components	Happy Path / UI	Unauthenticated, via Login → "Activate Account"	1. Navigate via Login link	Logo, "Activate Your Account" heading, instruction text, Reference ID field, User ID field, Date of Birth field, Submit button, Cancel button, footer all visible	N/A	Critical	✅ Pass
TC-AA-002	Page URL is correct after navigation	Happy Path / UI	On page	1. Assert URL	URL contains /activateUser	N/A	High	✅ Pass

TC-AA-003	All three mandatory fields display a * indicator	UI	On page	1. Inspect each field label	Reference ID, User ID, Date of Birth each show *	N/A	High	✅ Pass
TC-AA-004	Submit button is disabled while any mandatory field is blank	Business Rule	On page, all fields empty	1. Inspect Submit button state	Button disabled	N/A	Critical	✅ Pass
TC-AA-005	Submit stays disabled with only one of three fields filled	Business Rule	On page	1. Fill Reference ID only 2. Inspect button state	Button remains disabled	Reference ID: TESTREF123	High	✅ Pass
TC-AA-006	Submit becomes enabled once all three fields are non-empty	Functional	On page	1. Fill all three fields with any non-empty values	Submit button becomes enabled	Reference ID TESTREF123 , User ID TESTUSER01 , DOB 2000-01-01	Medium	✅ Pass
TC-AA-007	Date of Birth uses a native date picker and accepts a valid date	UI	On page	1. Verify input type="date" 2. Select a date	Field accepts and displays the date	DOB: 2000-01-01	Medium	✅ Pass
TC-AA-008	Invalid User ID is rejected server-side and shows an Invalid User ID toast	Negative	On page	1. Fill placeholder Reference ID/User ID/DOB 2. Click Submit	otp/request API returns 200; toast "Invalid User ID" shown; stays on /activateUser	Reference ID TESTREF123 , User ID TESTUSER01 , DOB 2000-01-01	Critical	✅ Pass
TC-AA-009	Cancel returns to the Login page	Functional	On page	1. Click Cancel	Redirected to /login	N/A	High	✅ Pass
TC-AA-010	Cancel works with a partially filled form	Functional	On page, some fields filled	1. Fill Reference ID + User ID 2. Click Cancel	Redirected to /login without extra confirmation	Reference ID TESTREF123 , User ID TESTUSER01	Medium	✅ Pass
TC-AA-011	Direct navigation / hard reload of the Activate Account URL	Negative	On page	1. Reload the browser	Expected: page persists. Actual (known defect DEF-002): redirected to /login , activation flow lost — same defect class as Forgot User ID's reload behavior	N/A	Medium	✅ Pass (documents DEF-002)
TC-AA-012	Credentials and identity values never appear in the URL	Security	On page	1. Fill form 2. Click Submit 3. Inspect URL	Reference ID / User ID never appear as URL query params	Reference ID TESTREF123 , User ID TESTUSER01	Critical	✅ Pass
TC-AA-013	SQL Injection payload in User ID is handled safely	Security	On page	1. Fill User ID with ' OR '1'='1 2. Click Submit	Treated as invalid; no SQL error surfaced; stays on /activateUser	User ID: ' OR '1'='1	High	✅ Pass
TC-AA-014	XSS payload in User ID is handled safely	Security	On page	1. Fill User ID with <script>alert(1)</script> 2. Click Submit	No JS dialog fires; stays on /activateUser	User ID: <script>alert(1)</script>	High	✅ Pass
TC-AA-015	Rapid double-click on Submit does not double-submit	Async/Race	On page	1. Fill form 2. Click Submit 3. Immediately click again	Expected: button disables in-flight, only 1 request fires. Actual (known defect DEF-003): button	Reference ID TESTREF123 , User ID TESTUSER01 , DOB 2000-01-01	Medium	✅ Pass (documents DEF-003)

					never disables, 2 identical <code>otp/request</code> calls fire			
TC-AA-016	Submit button re-enables after a failed activation attempt	State-Aware UI	On page	1. Submit invalid data 2. See "Invalid User ID" toast 3. Correct the User ID field	Submit re-enables without a page refresh, allowing resubmission	Corrected User ID: <code>CORRECTEDUSER01</code>	Medium	✅ Pass
TC-AA-017	Responsive layout on mobile viewport	UI/Responsive	On page	1. Set viewport to 375×667	All fields/buttons remain visible and usable	375×667	Low	✅ Pass
TC-AA-018	[1366×768 laptop] Submit and Cancel are fully within the viewport	UI/Responsive	On page	1. Set viewport to 1366×768 2. Check button bounding boxes	Both buttons fully within the viewport (previously clipped below the fold on the old 6-field form — resolved now that the form is 3 fields)	1366×768	High	✅ Pass
TC-AA-019	Browser Back button after Cancel returns without errors	Functional	Cancelled back to Login	1. Click Cancel 2. Press browser Back	No console errors after navigating back	N/A	Low	✅ Pass
TC-AA-020	Full activation with a fully-matching identity activates the account	Happy Path (Live, Manually-Assisted)	A genuinely pending (not-yet-activated) account's Reference ID/User ID/DOB	1. Fill matching Reference ID + User ID + DOB → Submit 2. Enter live OTP → Verify 3. Set New/Confirm Password → Save 4. Verify login with the new credentials	Reference ID+User ID+DOB match unlocks an OTP step; OTP verification unlocks Account Setup (New/Confirm Password); Save activates the account; login with the new credentials succeeds	Reference ID <code>SMCC202607306095</code> , User ID <code>SMCCSW10132</code> , DOB <code>11/05/1997</code> , OTP <code>0398</code> , Password <code>Sahayog@2026</code>	Critical	✅ Pass — full end-to-end confirmed, including a real post-activation login redirecting to <code>/HOME</code>

Live Happy-Path Confirmation (TC-AA-020)

Executed live with real, human-relayed data (no fabricated values, per project convention for verification-screen data):

- 1. **Step 1** — Reference ID `SMCC202607306095` + User ID `SMCCSW10132` + DOB `11/05/1997` → Submit → "OTP sent successfully", navigated to `/verifyotp`
- 2. **Step 2** — OTP `0398` → Verify → "OTP verified successfully", navigated to `/resetPassword` ("Account Setup" — confirmed User ID `SMCCSW10132`)
- 3. **Step 3** — New Password / Confirm Password `Sahayog@2026` → Save → "Password reset successfully", navigated to `/login`
- 4. **Verification** — Logged in with `SMCCSW10132` / `Sahayog@2026` → redirected to `/HOME` with no error, confirming the account is genuinely active and usable

This confirms the module's core purpose — activating a new account after identity verification — works correctly end-to-end.

Defect Log

Defect ID	Title	Description	Priority	Severity	Status
DEF-002	Reloading <code>/activateUser</code> redirects to Login instead of preserving the activation flow	A hard reload drops the client-side route entirely and lands on <code>/login</code> , losing the user's place in the activation flow — the same defect class as Forgot User ID's reload behavior (unlike <code>/login</code> , the SPA fallback route, which trivially survives a reload).	Low	Minor	Open

DEF-003	Submit button not disabled during in-flight activation request	A rapid double-click on Submit fires two identical <code>otp/request</code> calls instead of the second click being blocked.	Medium	Major	Open
---------	--	--	--------	-------	------

Coverage Notes

- The current live form has **3 fields** (Reference ID, User ID, Date of Birth), simpler than the 6-field shape (adding Name of User, Employee ID, Mobile No.) described in an older, stale `specs/AA_TS001-test-plan.md` written against a different environment (`14.142.238.28`). `ActivateAccountPage.ts` and the spec already reflect the current 3-field + OTP + password-setup shape.
- A previously-documented viewport-clipping defect (`BUG-005` , Submit/Cancel clipped below the fold at 1366×768 on the old 6-field form) is **resolved** — `TC-AA-018` confirms both buttons now fit at that resolution with the shorter 3-field form.
- `TC-AA-020` required a genuinely pending (not-yet-activated) account's identity data, supplied live by the user — the always-active test account (`nayan.aher@netwinindia.in`) cannot be reused for this test since activation only applies to pending accounts. The Reference ID/OTP/credentials used are now consumed (single-use); a fresh pending account would be needed to re-run this test live.

Recommendations

1. Preserve the Activate Account flow state across a reload, or explicitly redirect with a clear "your activation session was lost, please start again" message rather than a silent bounce to Login (DEF-002).
2. Disable the Submit button while the activation request is in flight (DEF-003) to prevent duplicate `otp/request` calls.
3. No blockers to go-live — the full activation flow (identity verification → OTP → password creation → login) works correctly end-to-end, confirmed with a real account.
